This material is intended for use by Investment Advisors, including with their clients.

The Comparative Benchmark used for the Top and Bottom 5 by Active Weight for the Picton Mahoney Fortified Equity Fund (FEQ) is a blended benchmark comprised of 50% S&P Global Large Mid Cap Index (Net Returns) (in CAD \$), 25% S&P/TSX Composite Index (TR), 25% FTSE TMX Canada 30 Day TBill Index (TR), which differs from FEQ's blended benchmark. The Manager believes that the S&P Global Large Mid Cap Index (Net Returns) (in CAD \$) is largely comparable and correlated to the MSCI World Index (Net Returns) (in CAD \$), the largest component of FEQ's benchmark. The benchmark used for the Top and Bottom 5 by the Active Long Weight for the Picton Mahoney Fortified Income Fund (FINC) is a blended benchmark comprised of the 75% ICE BofAML Global High Yield Index / 25% ICE BofAML Global Corporate Index (TR) (Hedged to CAD).

Risk/Reward Analysis results are calculated based on Class A fund unit's daily data since inception. Due to the fund's limited history, all risk/reward analysis results may not be statistically relevant. **Beta** measures the fund's volatility relative to its benchmark: a rating of "1" implies the fund's movements are identical to the index (typically you pay a manager to achieve beta of less than 1). **Up/Downside Capture** is a measure of an investment manager's performance during only the up or down movements of an index (ideally you want low downside and a fairly high level of upside): the numbers shown here are the fund's up/ down capture relative to the benchmark(s). **Maximum drawdown** measures the largest single drop in a class's Net Asset Value Per Unit from peak to trough before establishing a higher peak (the smaller, the better). **Holdings by Active Weight** is a measure of a stock's contribution to the fund's active performance. **Holdings by Active Long Weight** is a measure of a stock's contribution to the Fund's active long performance. A stock's active weight is determined by calculating the difference between the stock's % weighting in the fund as compared to stock's % weighting in the benchmark, and, ranking the difference for all stocks in the fund to generate the top and bottom 5 holdings. Active weight differs from the fund's absolute % holding of the stock and, as a result, a stock that is a top or bottom 5 holding by portfolio weight may not necessarily be a top or bottom 5 holding by active weight.

The compounded rate of return in "Growth of \$10,000 Investment" chart is used only to illustrate the effects of the compound growth rate and is not intended to reflect future values of the investment fund or returns on investment in the investment fund. Commissions, trailing commissions, management fees, performance fees and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. The indicated rates of return are the historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.
